Contribution summary

Group 43

October 2025

Bendourou Sami

- Apply the Facebook dataset, observing and discussing the strengths and weaknesses of the 2 algorithms
- Assisted in preparing and reviewing result tables for PageRank and HITS experiments.
- Helped summarize findings in the conclusion and verify correctness of numerical results.

Goh Jie Rong Sean

- Analyzed and discussed "parameter settings", "factors affecting performance" and "failure cases" for both PageRank and HITS

Paraschiv Emanuel Alexandru

- Implemented the algorithms for PageRank and HITS
- Proposed and added the social network epinions dataset
- Analyzed outputs for social network dataset for both PageRank and HITS, discussing strengths and weaknesses of each algorithm.
- Created the overall structure of the report

Varghese Ivan Soji

- Discussion (and proposal) of advanced areas/algorithms for PageRank (personalized, weighted, and hybrid) and HITS (stochastic HITS, HITS with priors, and TrustRank-HITS hybrid).
- Added the Wikipedia and Facebook Datasets, analyzing outputs for their convergence behavior, stability, and ranking significance.
- Ran both PageRank and HITS algorithms on the Wikipedia dataset.
